

the **Ultimate** in **Mobile Relocatable Security**

Shroud and Cable

mk3 Shroud and Cable, will secure one mk3 Safe Box or two mk2 Safe boxes.

mk2 Shroud and Cable

mk2 Hide Away Safe being slid into the Steel Shroud.

Theft from vehicles is increasing at an alarming rate. A thief can gain access to your Vehicle, lift the boot lever next to the drivers seat, grab anything valuable from the interior and glove box, go to the already open boot and take anything else they see, **all this in about 10 seconds**, try it yourself and you will realise it can be done.

The **Shroud and Cable is Australian designed and manufactured** specifically for the temporary security of the Hide Away Safe when an installed Docking Station or a Vehicle Fixing Kit is unavailable. We have two sizes one to secure the mk2 and another to secure the mk3 or Laptop Safe.

Shroud and Cable Specifications

Steel Shroud

Manufactured from 3mm thick Steel, folded and welded to the dimensions of the mk2 and mk3 Hide Away Safe Docking Stations and powder coated black.

The **Steel Shroud has four corner cable anchor points** at the rear for ease of use. Each side has numerous punched holes suitable for permanent concealed fixing of the Steel Shroud on its edges, back or top if required.

The **top of the Steel Shroud is fitted with m5x8mm high tensile clinch studs** with shake proof washers and high tensile nuts to match the existing fixing holes in the Hide Away Safe Docking Station and additional holes for conventional fixing down of the Steel Shroud and Docking Station if required.

Cable

Supplied with the Steel Shroud is a 1.8 meter long spring coiled 10mm plastic coated 8mm diameter oversized steel cable with an extra heavy duty 4-stage combination lock. Handgun legislation in the ACT only specifies a 6mm diameter cable. We give you **34% additional security**.

Fitting the Cable to the Steel Shroud: Slide one end of the Cable through at least two of the four corner anchor points at the rear of the Steel Shroud then, loop that end of the Cable around something solid and connect it to the combination lock on the other end and lock it. **Note:** Set your own combination.

Although the Hide Away Safe locked in the Steel Shroud is not bolted down the contents remain absolutely secure via the oversized 8mm Steel Cable that is attached to something solid eg. a seat bracket or boot hinge in a Vehicle or around the base of a toilet or secure piece of furniture in a Hotel / Motel room or any other solid item.

Where Can A Shroud and Cable Be Used

- Unavoidably having to leave valuables unattended in your Vehicle.
- When you need security in a hired Vehicle.
- At home overnight or at weekends.
- Staying overnight at a friends house.
- While staying in a Hotel / Motel, wrap the Steel Cable round the base of the toilet or other fixed item and lock the 4-stage combination lock.
- Where ever a Docking Station cannot be installed eg. rented house or in a hired or borrowed Car.
