

Relocatable, High Security, Light-Weight

Hide Away Safe can be Secured in most Vehicles

by first installing a Vehicle Fixing Kit in the Vehicle. Since 1993 we have designed a Vehicle Fixing Kit for practically every make of Vehicle and if we have not previously designed one for your Vehicle we will design one for you **FREE OF CHARGE**. Just tell us the make, model, year and type.

mk2 Steel Bracket Vehicle Fixing Kit secured in the rear of a Toyota Landcruiser.

mk2 and mk3 or Laptop Safe Marine Ply Vehicle Fixing Kit secured under the parcel shelf of a Commodore Sedan and a BMW Sedan.

It cannot be emphasized enough just how crucial it is to secure your valuable possessions in your Vehicle when you have to leave them unattended just as it is in your Residential Home, Office, Factory, Caravan or Motor Home.

Vehicle Fixing Kits Are Available In Two Styles

Depending on the Vehicle make, model, year and type and where in the Vehicle the Vehicle Fixing Kit will be installed. We have versions for both sizes of the Hide Away Safe: mk2 and mk3 or Laptop Safe.

1: Steel Bracket

The **Steel Bracket Vehicle Fixing Kit is manufactured from 3mm thick Steel and powder coated black**. The Steel backing plate has high tensile m5x8mm clinch studs, shake proof washers and high tensile nuts to match the existing fixing holes in the Docking Station.

The clinch studs are pressed into the Steel backing plate, making the back of the Steel backing plate smooth. Having no nuts on the outside of the Steel backing plate ensures if a thief does break into a Vehicle with an installed Vehicle Fixing Kit there are no nuts they can undo to remove the Safe Box.

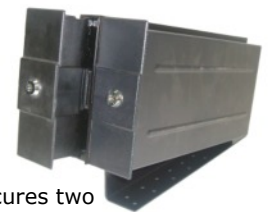

Depending on the Vehicle make, model, year and type and whether the Vehicle Fixing Kit is installed in the boot, under the front seat, in the back of a Hatch Back, in the rear of a 4 Wheel Drive or Station Wagon we have a Vehicle Fixing Kit that can be installed in each location.

Vehicle Fixing Kits for mk3 or Laptop Safe.

Secures two mk2 safes.

2: Marine Ply

Marine Ply Vehicle Fixing Kit secured under the parcel shelf.

When a Steel Bracket cannot be used to secure the Safe Box we supply a customised piece of Marine Ply. **We have a version for both mk2 and mk3 or Laptop Safe for each Vehicle that requires it.** The Marine Ply is installed under a parcel shelf or flat to the floor in the boot. The Vehicle Fixing Kit / Docking Station picture to your left and below right are versions that go underneath a parcel shelf. **NB:** Marine Ply is also used to secure a Docking Station under the front seat in some vehicles.

Global Leader In Portable Security

Hide Away Safe can be installed in virtually all vehicles and once the Safe Box is slid into the Vehicle Fixing Kit and locked with the supplied High Security Abloy Key the Safe Box and its contents are **THEFT PROOF** from a Vehicle break-in.
